

About DONG-IN ENSIS

After 35 years of building control panels, we are turning them into data infrastructure.

Since 1991, DONG-IN ENSIS has designed and built control panels for industrial and marine sites. On that foundation, we now make Intelligent Control Panels that collect and connect equipment data while controlling it.

Intelligent Control Panel

CEO Message

Industrial DX and AX start with field data.

Thank you for visiting DONG-IN ENSIS.

We began in 1991 as a supplier of industrial control equipment and grew into a company that designs and builds control systems for ships, energy facilities and plants. Over more than 750 projects, one thing became clear:

most equipment is already controlled by PLCs and drives, but the data they generate never leaves the control panel.

AI and smart factories need field data first. Our Intelligent Control Panel collects data where the equipment is controlled and delivers it to the cloud in a standard format. For manufacturers, it is the first step toward managing equipment with data. For IT companies, it is a reliable source of field data.

We will keep adding data and intelligence to the control technology we have built in the field for 35 years.

CEO, DONG-IN ENSIS CO., LTD. **Min-gi Baek**

Company overview

Company	DONG-IN ENSIS CO., LTD. ((주)동인엔시스)	
CEO	Min-gi Baek	
Founded	October 1991 (incorporated July 1997)	
Business	Intelligent Control Panels · control system engineering · system integration	
Sites	Head office	47, Jinyeon-ro 9beon-gil, Busanjin-gu, Busan
	R&D center	8F NS Tower, 47, Jinyeon-ro 9beon-gil, Busan · est. 2020
	Yangsan Factory 1	107, Gongwon-ro, Sangbuk-myeon, Yangsan-si

VISION

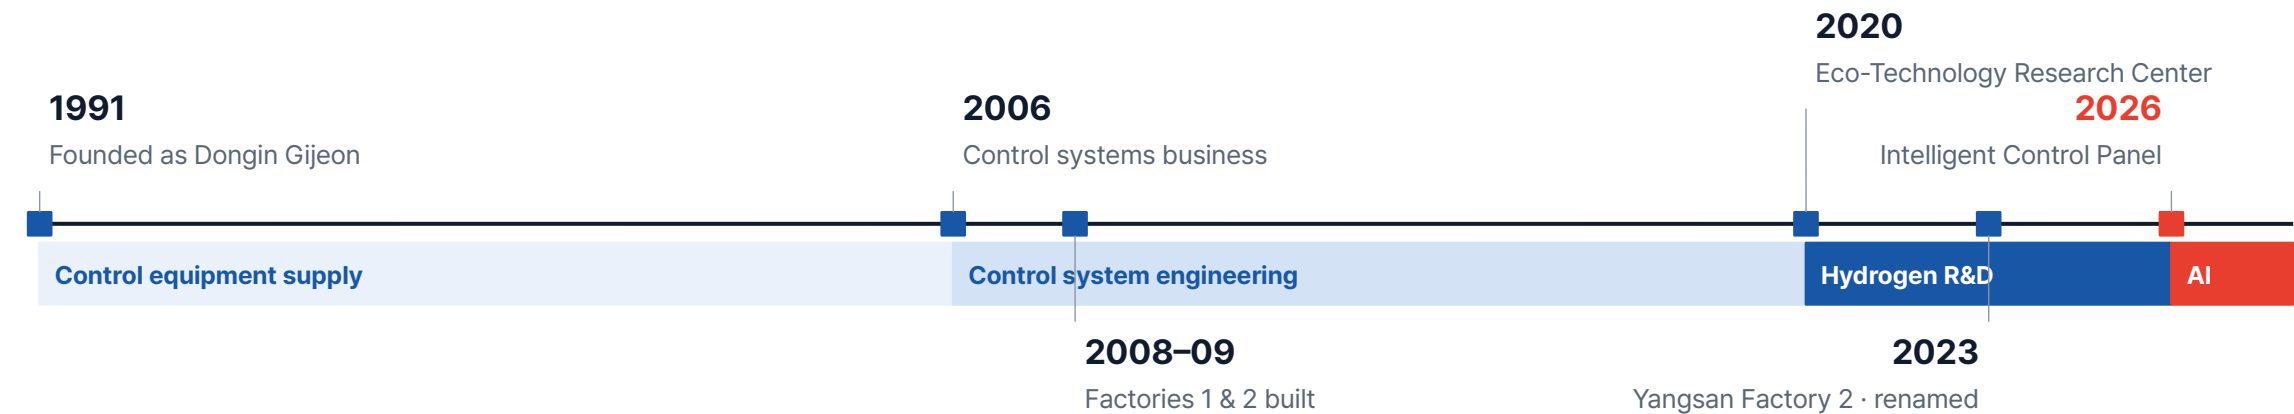

Accelerating DX and AX in manufacturing and maritime industries with field equipment data.

MISSION

Creating and connecting reliable data from the control panels that run the equipment.

From components to systems, from systems to data

35 years of growth, drawn to the actual timeline scale.

1991 – Control equipment supply Founded as Dongin Gijeon. Supplying global brands such as Siemens, Fuji Electric, ABB and Danfoss	2006 – Control system engineering Industrial and marine control systems: design, build, software and commissioning	2020 – Green ship & hydrogen R&D Eco-Technology Research Center founded; national R&D projects and liquid hydrogen station control	2026 – Intelligent Control Panel Panel-based industrial data infrastructure connecting field equipment to cloud and AI
--	---	---	---

Three foundations behind the Intelligent Control Panel

Data infrastructure is not built with software alone. It starts with hands-on experience controlling real equipment.

01 · MANUFACTURING

We design and build in-house

From panel design to build, wiring, PLC programming, factory testing and on-site commissioning.

- Yangsan Factories 1 & 2 and Gijang Factory
- Dedicated FAT test line
- Design and build to CE-UL standards

02 · FIELD EXPERIENCE

We control demanding sites

We have built and verified control systems in hydrogen, shipbuilding and plant sites with strict safety requirements.

- Liquid hydrogen station control systems nationwide
- FGSS test facility control for a leading shipbuilder
- Hybrid electric propulsion control for green ships

03 · R&D

We research data and predictive control

Our Eco-Technology Research Center leads national and regional R&D and industry-academia collaboration.

- 5 registered patents on liquid hydrogen station control
- National R&D on hydrogen-powered vessels
- Joint research with Korea Maritime & Ocean University

We design and build in-house

Panels are built in our own factories, and PLC/drive programming and commissioning are done by our engineers.

References in demanding sites

Liquid hydrogen charging stations, FGSS test facilities for a leading shipbuilder, and hybrid electric propulsion control.

Global brand partner

Official Schneider Electric SI partner and supply partner for ABB, Fuji Electric, Eaton and Danfoss.

Intelligent Control Panel · Manufacturing & Maritime DX/AX

From control to cloud, one control panel.

DONG-IN ENSIS Intelligent Control Panels control your equipment with a PLC while collecting its operating data, and connect it securely to the cloud without extra data-collection hardware.

35+ years

of OT engineering

PLC → Cloud

no extra gateway

MQTT / TLS

data transfer · secured link

REST API

MES · monitoring · analytics integration

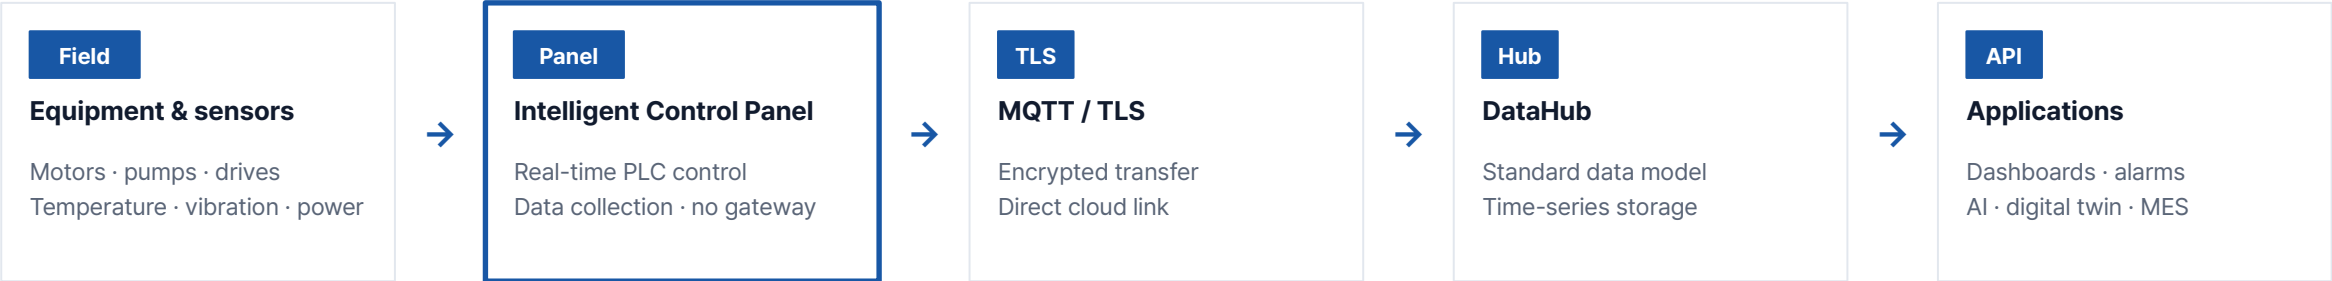

Background: liquid hydrogen station · illustration

The control panel becomes data infrastructure

We reduced the usual PLC – gateway – server stack to a single control panel.

01 Real-time PLC control & data collection Control logic and interlocks stay with the PLC on site.	02 MQTT / TLS cloud transfer The PLC sends operating data over MQTT, with the link protected by TLS.	03 DataHub standard data · time series Data from each piece of equipment is organized in a common structure and stored over time.	04 REST API integration A REST API your MES, monitoring and analytics systems can connect to.
---	---	--	--

From field equipment to AI, one continuous chain

Control stays on site The server never controls equipment directly; interlocks and final control remain with the PLC.	Secure connection Field and cloud are linked through TLS-encrypted MQTT.	A data model that scales As equipment and sensors are added, AI and digital twins keep using the same standard structure.
---	--	---

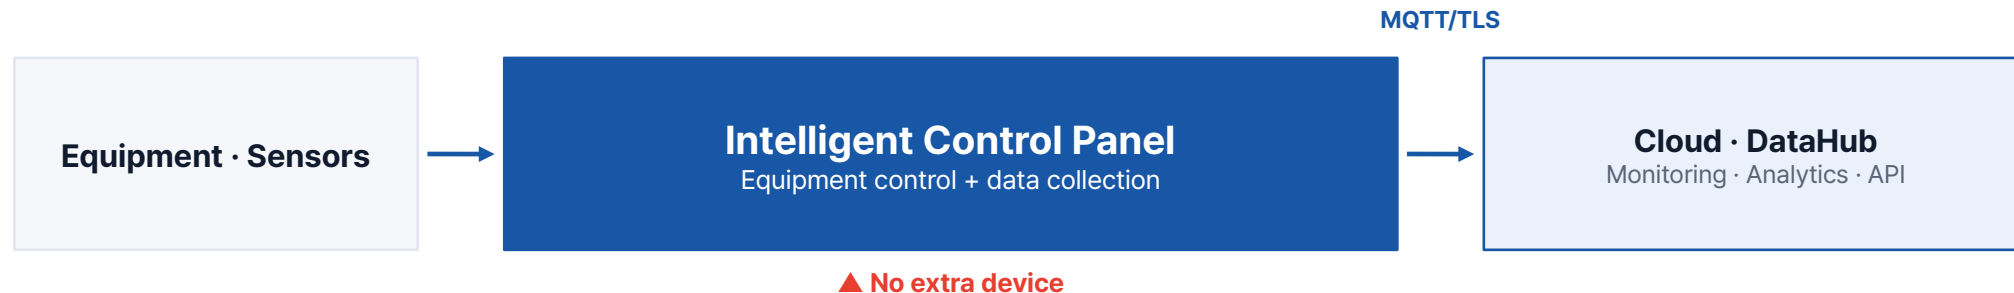

No extra data-collection device needed to get your data

Control stays on site; operating data goes from the control panel to the cloud.

Typical data-collection setup

DONG-IN ENSIS Intelligent Control Panel

From land to sea, wherever motors run

One Intelligent Control Panel per site. We bring the control experience built in hydrogen, shipbuilding and plant projects.

Most field problems start with missing data

■ ISSUE 01

Equipment stops at dawn, and no one knows why

Crews respond only after a failure, and lost production grows with every hour of downtime.

■ ISSUE 02

When experts retire, their know-how leaves too

Judgment based on sound and experience is never recorded.

■ ISSUE 03

Signs of overheating and overload go unrecorded

Without a history of temperature, current and vibration, prevention is difficult.

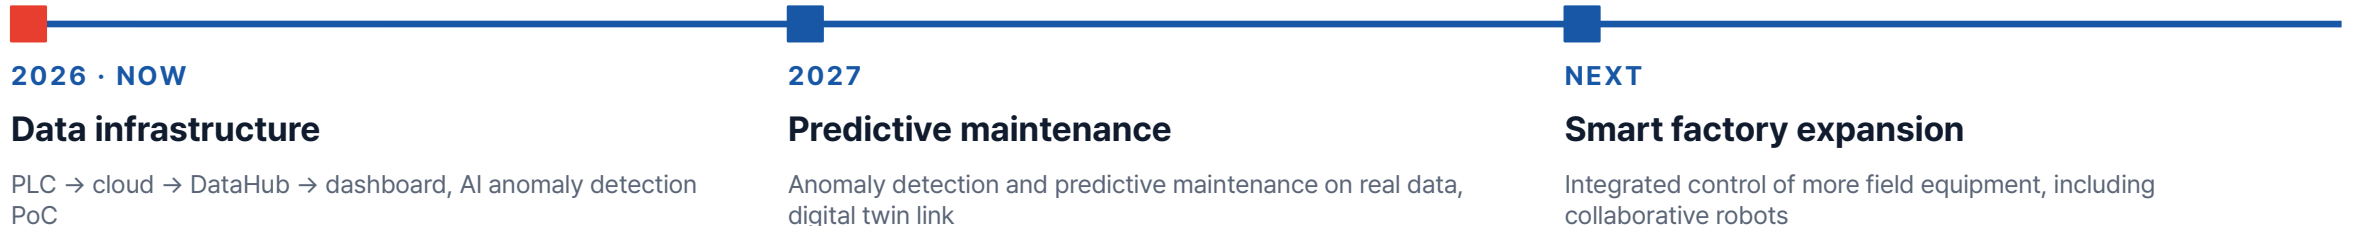

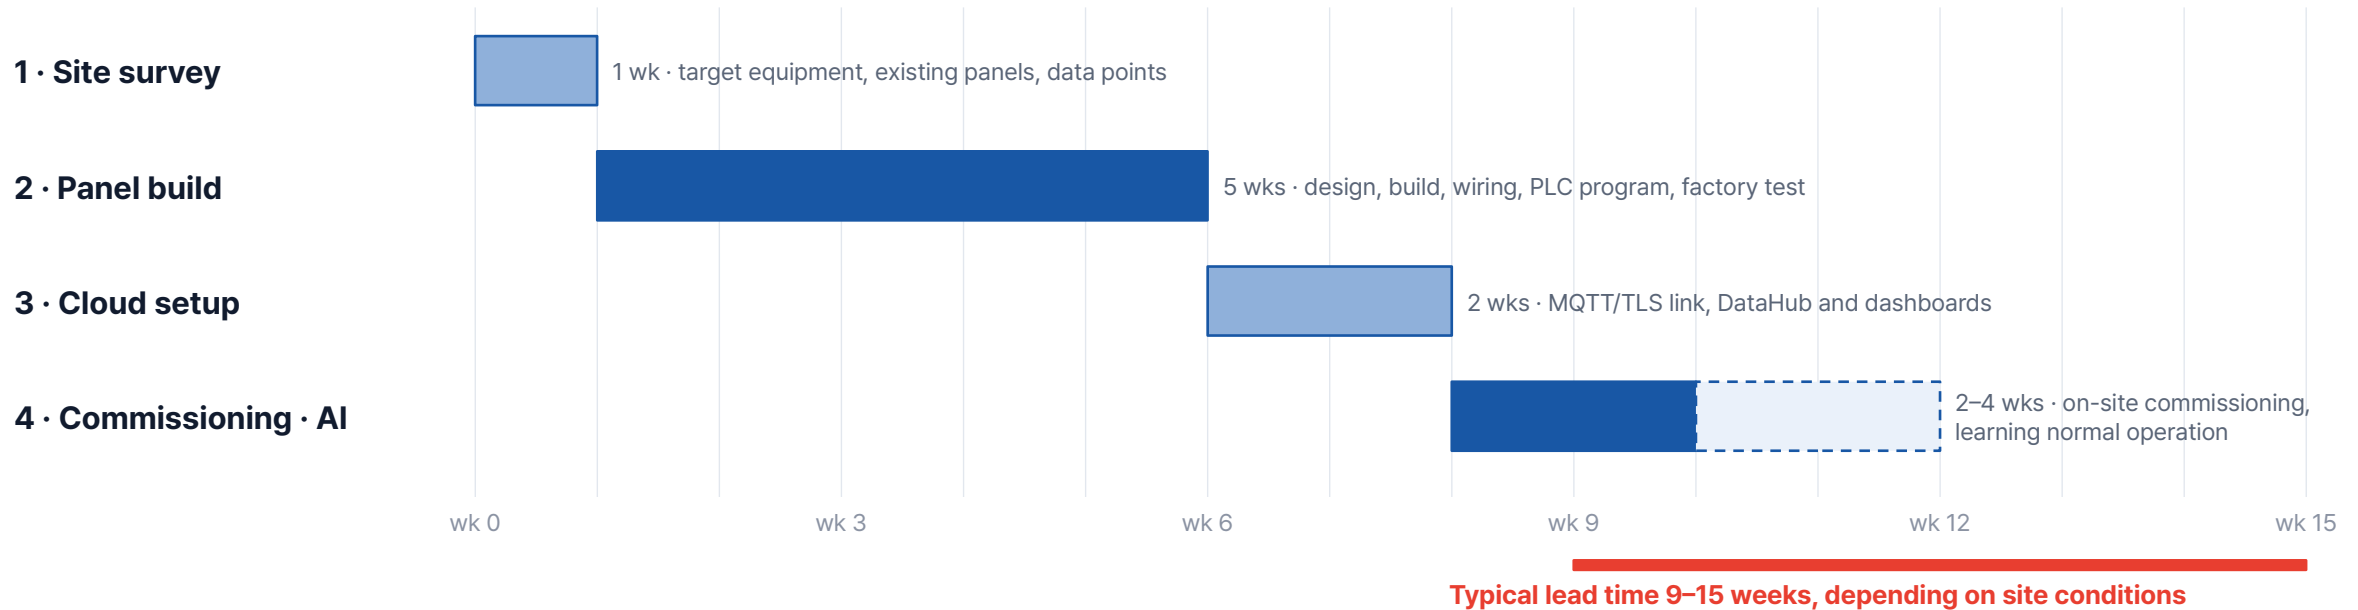

Most equipment is already controlled by PLCs and drives, yet the data they produce never leaves the control panel.

Intelligent Control Panel in a pump room · illustration

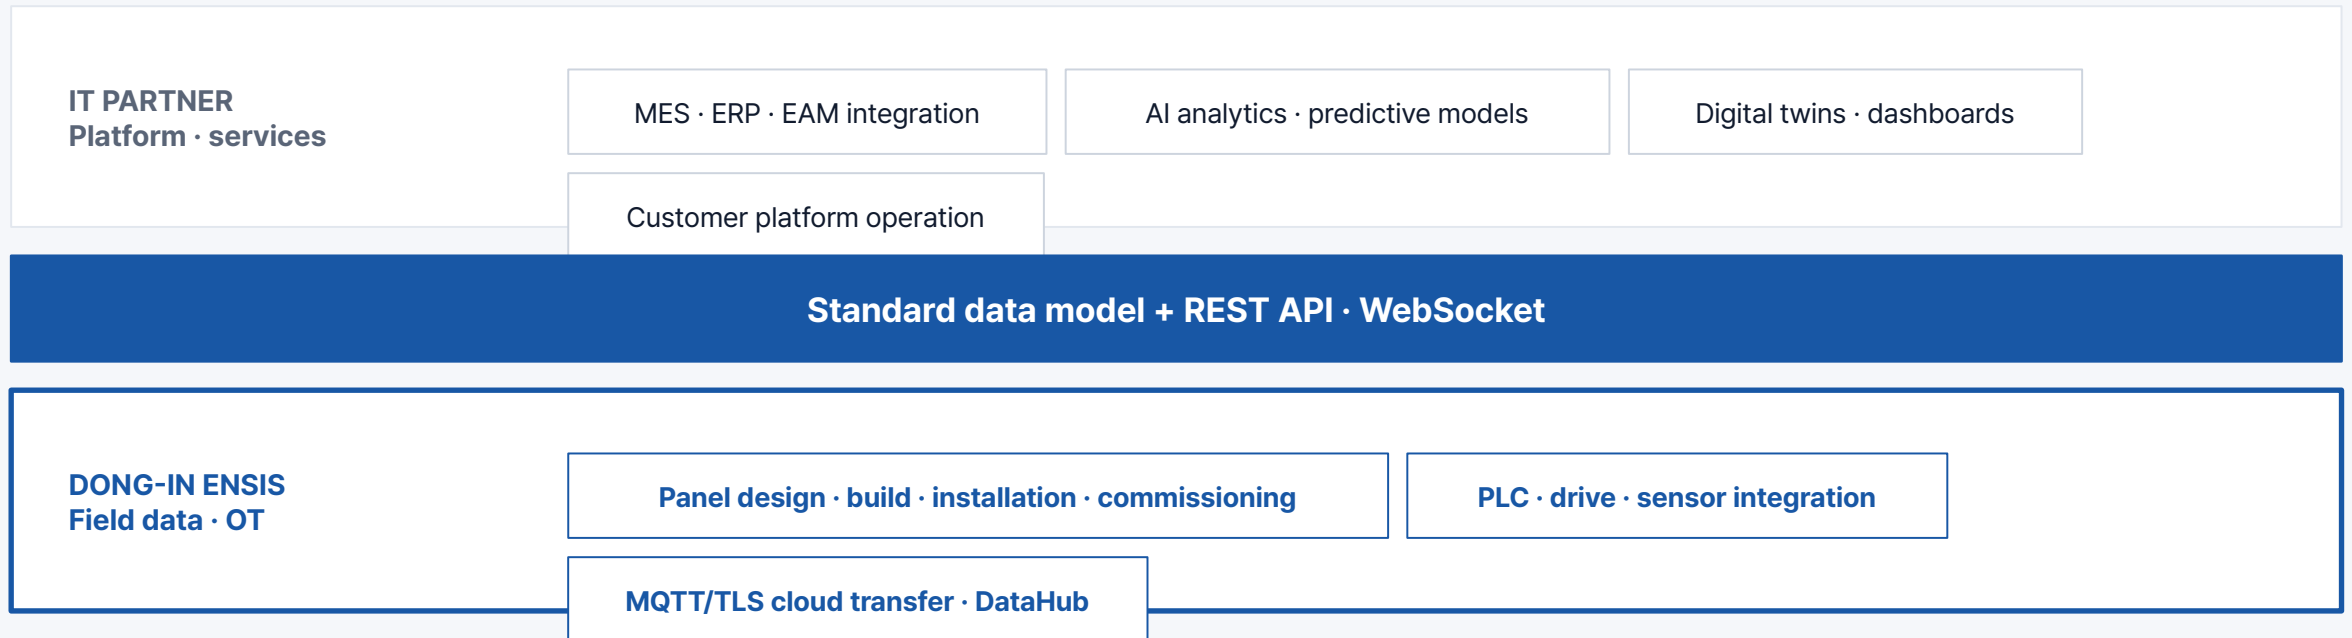

The Intelligent Control Panel records data while it controls, and flags anomalies early.

From site survey to AI training, one company end to end

We take care of the OT scope in your smart factory projects

If your AI and platform are ready but field data is not, DONG-IN ENSIS handles everything from the control panel to a standard API.

We focus on connecting PLCs to the cloud as simply and securely as possible. For SCADA, MES, AI and smart factory platforms, keep using your own solutions.

Key milestones since 2020

Since founding the Eco-Technology Research Center, we have expanded hydrogen and marine R&D and production capacity, leading to the Intelligent Control Panel business.

2026	Launched the Intelligent Control Panel business Innovation Premier 1000 (MOTIE) · Hydrogen Specialized Company · 5 patents on liquid hydrogen station control systems
2025	ISO 45001 certified MAINBIZ · INNOBIZ certified · Preliminary Hydrogen Specialized Company
2024	Busan Strategic Industry Leading Company Regional Specialized Legend 50+ · family company agreement with Korea Maritime & Ocean University
2023	Yangsan Factory 2 completed · renamed DONG-IN ENSIS MOF small hydrogen-powered vessel project · Busan Hidden Champion; Service Strong SME
2022	National Representative Innovative Company (MOF) Busan Hydrogen Alliance member · Technology Credit Bureau (TCB) T-4 rating
2021	Electric hybrid fishing vessel project Ministry of Oceans and Fisheries project on core equipment for electric hybrid fishing vessels
2020	Eco-Technology Research Center founded Danfoss drives & soft starters and ABB low-voltage distribution agency

Milestones from 1991 to 2019 are shown in 'Our Journey'.
